SOC 2 Readiness Program — Enterprise Edition

Full-Scope SOC 2 Preparation for Modern Cloud Companies

Comprehensive control mapping, evidence preparation, and audit simulation.

1. EXECUTIVE SUMMARY

The SOC 2 Readiness Program is a full-scope engagement for organizations that want to enter a SOC 2 Type I or Type II audit with confidence. This program goes beyond basic checklists and creates a structured, measurable, and repeatable compliance foundation covering people, processes, and technology.

Cypentra focuses on cloud-native startups, SaaS vendors, and growing technology companies that must demonstrate strong security controls to enterprise customers, regulators, and investors.

2. SOC 2 CONTROL FRAMEWORK (CC1.0 – CC9.0)

Code	Area
CC1.0	Control Environment
CC2.0	Communication & Information
CC3.0	Risk Assessment
CC4.0	Monitoring Activities
CC5.0	Control Activities
CC6.0	Logical and Physical Access Controls
CC7.0	System Operations
CC8.0	Change Management
CC9.0	Risk Mitigation

Within this program, each CC area is reviewed, documented, and scored so that you understand exactly where you stand against SOC 2 expectations.

3. TRUST SERVICES CRITERIA – DEEP VIEW

Criteria	Description	Typical Scope in Program
Security	Protection of systems and data against unauthorized access.	Mandatory baseline for all clients.
Availability	Systems remain available for operation and use as committed.	Optional, often recommended for SaaS.
Confidentiality	Information designated as confidential is protected.	Highly relevant for B2B & enterprise data.
Processing Integrity	System processing is complete, valid, accurate, timely.	Important for transaction-heavy systems.
Privacy	Personal information is collected, used, retained, disclosed appropriately.	Relevant for PII-heavy products.

During scoping, we identify which Trust Services Criteria apply to your SOC 2 report and tailor the program accordingly.

4. READINESS ASSESSMENT METHODOLOGY

Cypentra uses a structured readiness methodology combining control maturity scoring, qualitative risk analysis, and evidence evaluation. Each control is rated on a 0–5 maturity scale:

0 — Not Implemented
1 — Initial / Ad-hoc
2 — Partially Implemented
3 — Implemented / In Use
4 — Managed & Measured
5 — Optimized & Continuously Improved

This scoring feeds into a visual heatmap and executive summary so leadership clearly understands where investment is needed before entering an audit.

5. EVIDENCE COLLECTION SCOPE (ADVANCED)

We coordinate with multiple teams—Engineering, Security, HR, Legal, Operations, and Vendor Management—to gather the evidence an auditor will expect:

- Organizational charts and role descriptions
- Information Security, Access, and Change Policies
- Access review reports and user listings
- Infrastructure and network diagrams (cloud architecture)
- Incident response procedures and test reports
- Vulnerability scans, penetration test summaries (if available)
- Vendor inventory and risk review documentation
- Backup and recovery procedures and test logs
- Monitoring and alerting configurations and sample alerts
- HR security procedures (onboarding, offboarding, background checks where applicable)

6. DOCUMENTATION PACKAGE (FULL SOC 2)

As part of the Readiness Program, we help you build or refine a documentation set suitable for SOC 2. Typical deliverables include:

Category	Examples
Policies	Information Security, Access Control, Change Management, Incident Response, Vendor Ma
Procedures	On/Offboarding steps, Access Request workflows, Incident handling playbooks, Backup rou
Logs & Records	Change tickets, incident records, access reviews, vendor assessments, monitoring alerts, b
Diagrams & Reports	Network and architecture diagrams, risk assessments, audit reports, penetration test summ

7. CONTROL MATURITY SCORECARD

We summarize your SOC 2 posture in a scorecard format by mapping each major area to its maturity score.

Area	Score (0–5)	Comment
Access Management	3	Implemented but lacks periodic review automation.
Change Management	2	Process exists but not documented fully; evidence inconsistent.
Logging & Monitoring	3	Central logging in place; tuning and alerting improvements needed
Vendor Management	2	Vendor list tracked; formal risk review process still maturing.
Incident Response	1	Plan drafted; not yet tested or trained across teams.

This gives leadership and auditors a clear, actionable snapshot of current readiness.

8. AUDIT SIMULATION (MOCK AUDIT)

Before engaging a CPA firm, Cypentra conducts an internal mock audit-style review focused on:

- Testing sample controls for design and operating effectiveness
- Reviewing evidence format and completeness
- Identifying gaps that an auditor is likely to flag
- Validating that narratives and diagrams accurately reflect reality
- Stress-testing incident and change processes via tabletop exercises

This phase reduces surprises during the real audit and increases confidence for both management and auditors.

9. 60 / 90 / 180 DAY SOC 2 ROADMAP

The Readiness Program closes with a time-based roadmap to take you from assessment to audit-ready:

First 60 Days
• Close critical gaps in access control, logging, and backups
• Finalize core policies and communicate them to staff

Next 90 Days
• Mature change management and incident response practices
• Complete risk assessments and vendor reviews
• Gather and normalize long-term evidence (logs, tickets, reports)

Up to 180 Days
• Stabilize processes and ensure repeatability
• Engage a CPA firm for SOC 2 Type I or Type II audit
• Support during audit fieldwork as needed

10. OPTIONAL ADD-ONS & CONTINUOUS SUPPORT

To extend beyond readiness, Cypentra offers optional services:

- Policy drafting and full implementation support
- Continuous control monitoring and reporting
- Dedicated vCISO advisory (strategic governance)
- Auditor liaison and support during fieldwork
- Periodic security and compliance reviews (quarterly/bi-annually)

11. ENGAGEMENT TERMS — NDA + NO LONG COMMITMENT

Non-Disclosure Agreement (NDA)
All work is performed under a mutual NDA to protect your infrastructure, data, and business information. No assessment activities begin until the NDA is signed.

No Long-Term Lock-In
The SOC 2 Readiness Program is delivered as a project-based engagement. There are no mandatory long-term contracts; you remain in control of any follow-up services such as audits, additional implementations, or vCISO retainers.
